

# *Espanola Water Pollution Control Plant*

## *Annual Operating Report*

*ECA 1945-BJ6Q3M  
Issued January 20, 2020*

***January 1, 2020 – December 31, 2020***

Prepared by the Ontario Clean Water Agency  
For The Corporation of the Town of Espanola

## **SECTION 1: INTRODUCTION**

The Ontario Clean Water Agency (OCWA) acts as the operating authority for the Espanola wastewater treatment. This document is prepared by OCWA in accordance with Environmental Compliance Approval (ECA) #1945-BJ6Q3M. The report is required to include the following information:

- (i) A summary and interpretation of all Influent and a review of the historical trend of the sewage characteristics and flow rates;
- (ii) A summary and interpretation of all Final Effluent monitoring data, including concentration, flow rates, loading and a comparison to the design objectives and compliance limits in this Approval, including an overview of the success and adequacy of the Works;
- (iii) A summary of all operating issues encountered and corrective actions taken;
- (iv) A summary of all normal and emergency repairs and maintenance activities carried out on any major structure, equipment, apparatus or mechanism forming part of the Works;
- (v) A summary of any effluent quality assurance or control measures undertaken;
- (vi) A summary of the calibration and maintenance carried out on all Influent, and Imported Sewage monitoring equipment to ensure that the accuracy is within the tolerance of that equipment as required in this Approval or recommended by the manufacturer;
- (vii) A summary of efforts made to achieve the design objectives in this Approval, including an assessment of the issues and recommendations for pro-active actions any are required under the following situations:
  - i. When any of the design objectives is not achieved more than 50% of the time in a year, or there is an increasing trend in deterioration of Final Effluent quality;
  - ii. When the Annual Average Daily Influent Flow reaches 80% of the Rated Capacity;
- (viii) A tabulation of the volume of sludge generated, an outline of anticipated volumes to be generated in the next reporting period and a summary of the locations to were the sludge was disposed;
- (ix) A summary of any complaints received and any steps taken to address the complaints; and
- (x) A summary of all Bypasses, Overflows, other situations outside Normal Operating Conditions and spills within the meaning of Part X of EPA and abnormal discharge events;
- (xi) A summary of all Notice of Modifications to Sewage Works completed under Paragraph 1.d. of Condition 10, including a report on status of implementation of all modification;
- (xii) A summary of efforts made to achieve conformations with Procedure F-5-1 including but not limited to projects undertaking and completed in the sanitary sewer system that result in overall Bypass/Overflow elimination including expenditures and proposed projects to eliminate By[ass/Overflows with estimated budget forecasting for the year following that for which the report is submitted; and

- (xiii) Any changes or updates to the schedule for completion of construction and commissioning operation of major process(es) / equipment groups in the Proposed Works

## **SECTION 2: Description of Facility**

Capacity of Facility: 4,500 m<sup>3</sup> / day (average flow)

Service Area: Town of Espanola

Service Population: 5,364

Effluent Receiver: Spanish River

Major Process: Extended Aeration

Facility Classification: Wastewater Class 2

Collection Classification:

## **SECTION 3: Executive Summary**

Sampling parameters were **not exceeded** during the 2019 reporting period.

The total effluent discharge from the Sewage Treatment Plant for the year was 1,153,327m<sup>3</sup>.

The total raw sewage flow into the Sewage Treatment Plant for the year was calculated to be 1,153,327m<sup>3</sup>.

## **SECTION 4: Process Data**

The facility operator collects grab samples of raw sewage and sends them to an accredited laboratory for analysis. Raw flows are calculated using flow meter values.

Raw (Influent) Sampling						
Parameter	Frequency	Method	Results			
			Min	Avg	Max	
BOD <sub>5</sub> (mg/L)	Weekly	24hr Composite – External Analysis (Lab)	3	95.17	182	
TSS (mg/L)	Weekly	24hr Composite – External Analysis (Lab)	33	140.9	391	
TP (mg/L)	Weekly	24hr Composite – External Analysis (Lab)	0.42	1.911	3.74	
TKN (mg/L)	Weekly	24hr Composite – External Analysis (Lab)	9.2	17.23	35.6	
Alkalinity (mg/L as CaCO <sub>3</sub> )	Weekly	24hr Composite – External Analysis (Lab)	85	111.7	180	
Flow (m <sup>3</sup> /d)	Daily	Flow meter	2,332	3,151	4,208	

The facility operator collects effluent samples and sends them to an accredited laboratory for analysis. All samples are collected on a weekly basis. Depending on the parameter samples are collected by a composite sampler or by taking a grab sample.

### Treated (Effluent) Sampling

Parameter	Frequency	Method
CBOD <sub>5</sub>	Weekly	24hr Composite – External Analysis (Lab)
TSS	Weekly	24hr Composite – External Analysis (Lab)
TP	Weekly	24hr Composite – External Analysis (Lab)
TAN	Weekly	24hr Composite – External Analysis (Lab)
Nitrite	Weekly	24hr Composite – External Analysis (Lab)
Alkalinity	Weekly	24hr Composite – External Analysis (Lab)
E.Coli	Weekly	Grab – External Analysis (Lab)
pH	Weekly	Grab/Probe – External Analysis (Lab)
Temperature	Weekly	Grab/Probe – External Analysis (Lab)
Flow	Daily	Equal to Raw Flow Rate

Compliance limits are based on monthly discharges for effluent concentrations and effluent loadings. In addition, the effluent is essentially free of floating and settleable solids and does not contain oil or other substance in amounts sufficient to create a visible film or sheen or foam or discolouration on the receiving waters.

### Treated (Effluent Discharge) Sampling

Month	CBOD <sub>5</sub>		Suspended Solids		Total Phosphorus		TAN		pH	
	Avg. Eff	Avg. Load	Avg. Eff	Avg. Load	Avg. Eff	Avg. Load	Avg. Eff	Avg. Load	Monthly	Monthly
	mg/L	kg/d	mg/L	kg/d	mg/L	kg/d	mg/L	kg/d	Min	Max

October	13.8	11.1	65	33.2	152	98.4	15.3	14.73
November	13.1	11.5	28	17.25	42	18.8	13.8	13
December	13	11.9	17	12.4	640	20.47	10.1	9.37

\* E.coli average is calculated as a geometric mean

The raw and effluent parameters specified in the above tables are analyzed by SGS Lakefield Research, an accredited laboratory located in Lakefield, Ontario.

Flow Volumes				
2Month	Total Volume (m <sup>3</sup> )	Avg Daily Flow (m <sup>3</sup> /d)	Peak Daily Flow (m <sup>3</sup> /d)	Discharge Volumes (m <sup>3</sup> )
January	98,253	3,169.45	3,512	98,253
February	87,659.13	3,022.73	3,583.15	87,659.13
March	96,489.51	3,112.56	3,71098	96,489.51
April	99,943.81	3,331.46	4,189.53	99,943.81
May	108,865.36	3,511.79	4,208.30	108,865.36
June	101,889.6	3,396.32	3,945.34	101,889.6
July	106,683	3,441.39	4,098.08	106,683
August	99,008.24	3,193.81	4,042.14	99,008.24
September	86,686.18	2,889.54	3,322.97	86,686.18
October	85,855.76	2,769.54	3,678.46	85,855.76
November	90,241.03	3,008.03	3,616	90,241.03
December	91,752.43	2,959.76	3,808	91,752.43
<b>Total</b>	<b>1,153,327.09</b>			<b>1,153,327.09</b>
<b>Average</b>		<b>3,151.17</b>		
<b>Maximum</b>			<b>4,208.30</b>	

Year	Total Raw Sewage Flow m <sup>3</sup> /d	Avg Day Sewage Flow m <sup>3</sup> /d	Max Day Sewage Flow m <sup>3</sup> /d	Avg Day % of Rated Capacity 4,500 m <sup>3</sup> /d
2020	1,153,327	3,151.17	4,208.3	70%
2019	1,134,627	3,108.57	4,589	69%
2018	1,158,800	3,174.79	6,802	70.5%
2017	1,081,008	2,969.8	5,346	65.9%

The average flows measured into the sewage treatment plant did not exceed the specified average daily flow of 4500 m<sup>3</sup>/day in 2020.

The average daily flow for 2020 is 3,151/d which is approximately 70% of the rated capacity therefore, no assessment is required. The highest recorded peak flow occurred in May (4,208m<sup>3</sup>/d) and was approximately 94% of the average rated capacity, however the peak flow rate specified in the ECA is 12,300 m<sup>3</sup>/d. The highest recorded flow was 34% of the peak flow rating. The 2020 sewage flows are slightly higher than 2019 however, flows over the past four years are relatively stable with very little fluctuations for average and total flows. The maximum daily sewage flows are lower than previous years.

The total raw sewage flow into the Sewage Treatment Plant for the year was calculated to be [1,153,327m<sup>3</sup>](#).

The total effluent discharge from the Sewage Treatment Plant for the year was [1,153,327m<sup>3</sup>](#). Effluent flows are equal to the raw flows.

The average concentrations and loadings for the above parameters were well within the compliance limits specified in the facility ECA. The objective limits specified in the ECA were met more than 50% of the time during the [2020](#) operating year. The operator did not observe a visible film, sheen, foam or discolouration on the receiving waters nor did he notice floating or settleable solids.

To ensure objective limits are met, in-house tests are conducted by licensed Operators using Standard Methods. The data generated from these tests are used to determine the treatment efficiency while maintaining process control. All in-house monitoring equipment is calibrated based on the manufacturers recommendations.

## **SECTION 5: Facility Upsets & Non Compliances**

During the [2020](#) year there were no spills, overflows, bypasses or non-compliances. Since there were no bypasses or overflows, no projects were undertaken in the sanitary sewer system. Minor callouts were mostly due to power failures. There were no process related callouts for the reporting period.

In September, the monthly geometric mean for E.coli was exceeded with a result of 300 GMD. During the month, treatment of wastewater was administered through the use of a single clarifier. The second clarifier was taken down for some refurbishment work. During this time, it was found the sludge blanket sat high on the clarifier with no room to waste much. Once the second clarifier was back online and results quickly showed improvement.

## **SECTION 6: Maintenance**

Plant maintenance is monitored using a Work Management System (WMS). Effluent monitoring equipment was calibrated as required in [2020](#). The flow meters were verified on August 26, 2020, all flow meters passed. Verification records are maintained on site and electronically on the OCWA Hub server. Maintenance and verification reports are attached as [Appendix A](#). Major maintenance is listed in the table below.

<b>Work Order</b>	<b>Completion Date</b>	<b>Comment</b>

Titanium	3.90	3.75	2.68	4.02	3.9
Vanadium	0.16	0.1805	0.218	0.22	0.19

---

A total volume of [4,357.7m<sup>3</sup>](#) was removed from the Espanola WPCP in [2020](#) and was disposed of at the Kelly Lake Biosolids Facility. It is expected that the volume of sludge generated over the next reporting period will be equivalent to the volume generated in [2021](#).

Sludge is hauled by William Day Construction under ECA #A8911 and is disposed of at the Kelly Lake Biosolids Facility.

## **SECTION 8: Complaints**

There were no community complaints in the [2020](#) reporting year

## **SECTION 9: Additional Information**

Due to the pandemic, in 2020, no work was started or completed for the Proposed Works included in the ECA. Work is beginning in 2021.

The liquid in the clarifier would need to be at an elevation about twelve inches below the weir plate.  Mobilize and demobilize including travel cost and room/board for the crew.  Cleaning of the concrete using high pressure water/sand blasting techniques to remove the surface of the concrete and provide the clean sandpaper-like surface profile needed to apply repair materials.  Remove delaminated concrete and rebuild affected areas using a water born epoxy mortar.

													Smooth the entire interior surface to be treated with a parge coat of epoxy. This epoxy would also act as the primer for the anti-algae liner.
													Apply two coats of an anti-algae liner material developed specifically for clarifier weirs. The liner will leave a smooth surface and has additives to discourage algae growth.

<a href="#">1623666</a>	0000143004	METER FLOW FT-302 RAW SEWAGE BYPASS	5740, Espanola WWTP, Process, Process Control and Monitoring, Solids Handling	CALL	Refurbish/Replace/Repair	0		5740 Espanola STP Bypass flow call out alarm	CLOSE	2/16/20 07:50 AM	2/16/20 09:15 AM		-Operator received a call for Espanola STP Bypass flow alarm and operator went on Wonderware to view trends but it was not trending data so the operator responded. Once onsite operator was on top of the Bypass flow meter and there were no indications that a Bypass had occurred and I even received a couple calls while standing there. There was fresh snow in the bypass which was setting off flow sensor and operator noticed that the drum that houses the flow meter had moved and flow meter was most likely hitting the drum and giving a false flow. Snow was removed and drum moved to a better position and the Bypass flow alarm stopped calling out.
